Housing and Utilities Infrastructure modernization is due to be accompanied by reduction of specific operational costs and introduction of energy saving technologies
From the address of the President of the Republic of Kazakhstan to the people of Kazakhstan

«A New Decade, a New Economic Growth, and New Opportunities for Kazakhstan»

International Conference "Housing and Utilities Infrastructure of the Republic of Kazakhstan: Challenges, Solutions, Prospects"

27-28 October 2010, Astana, Kazakhstan
KORME Exhibition Complex

The International Conference "HOUSING AND UTILITIES INFRASTRUCTURE OF THE REPUBLIC OF KAZAKHSTAN – CHALLENGES SOLUTIONS, PROSPECTS" is a major event devoted to Kazakhstan housing and utilities infrastructure and its development and strengthening mutual advantageous cooperation of the Republic of Kazakhstan on implementation of Comprehensive Plan of modernization and development of housing and communal services till 2020

Comprehensive Plan Goals:

- Modernization and development of existent communal systems;
- Repair and maintenance support of multiunit residential properties;
- Providing with water supply and disposal services to rural settlements and townlets;
- Development of institutional basis to increase housing and communal services effectiveness

The main prerequisites for successful Comprehensive Plan's implementation are increased investment attractiveness of the housing and utilities sector, integration of energy and resource saving technologies, reducing operating costs and introduction of new forms and methods of administration and management

Conference is an excellent opportunity to

- **Obtain first-hand information** about the current situation in field of housing and communal services, market participants cooperation **legal framework, investment projects and prospects**
- **Meet representatives** of the high management of regional and urban administrations (**akimats**) of the Republic of Kazakhstan, water discharge and service, heating, gas and power supply, municipal and utilities services organizations in a businesslike atmosphere
- **Present your Company** as a reliable contractor and partner in implementation of innovation projects in housing and communal services
- **Put your idea on introduction your Company experience, products and services** within the Comprehensive Plan implementation

The conferences hall become an excellent platform for bringing together direct Customers (housing and utilities administrations) and the business community for direct discussion of solutions and prospects for participation in the reform and modernization of the housing and utilities sector of the Republic of Kazakhstan.

Audience:

- Representatives of related ministries and government bodies supervising fuel-and-energy complex and utilities sector
- Head and Business managers of municipal organisations providing services to communal sector
- Top and business development management of water, gas and heating services and supply companies
- Top Management and managers of pipeline construction and rehabilitation contractor organisations
- Top management and managers of power generating and distribution companies
- Top management and managers of power facilities and energy lines construction
- Business development managers and managers of financial institutions and banks
- Scientists, representatives of related R&D and educational establishments, companies providing consulting services and specializing in utilities researches and advanced development

Modern situation of housing and utilities services in the Republic of Kazakhstan is evaluated in terms of non effective management system and fair financial situation housing and utilities services entrepreneurs, high costs, disincentive operational costs of housing and communal services, underdevelopment of competitive environment and as a result is high capital consumption, non effective activity of enterprises, high level of energy, water and other resources losses.

At the same time engineering systems and equipment repairing works are planned according to the availability of financial funds instead of annual consumption calculations and scheduled preventive maintenance gave place to emergency recovery works. Therefore the problem of technical conditions improvement of communal systems is still not resolved. That leads to increasing number of accidents, engineering systems operation failure and over expenditures of material and technical as well as financial resources.
